BRUNNSCHWEILER

PRELIMINARY TECHNICAL SUMMARY

Industrial silencers

Noise attenuation in air systems preserving the expected operational condition.

OVERVIEW

Silencers are scaled to reduce sound propagation without introducing pressure drop incompatible with the system.

BENEFITS AND CHARACTERISTICS

- Frequency band attenuation
- Controlled pressure drop
- Materials suitable for flow
- Geometry adapted to the duct

This summary is informative. Dimensions, materials, performance and final scope are defined by engineering after the diagnosis of the actual conditions of the process.
