BRUNNSCHWEILER

PRELIMINARY TECHNICAL SUMMARY

Mist extraction and exhaust systems

Localized capture of steam and mist before they spread across the plant.

OVERVIEW

Capture hoods and local exhaust ventilation act directly at the source, protecting the workplace and reducing the load on general ventilation.

BENEFITS AND CHARACTERISTICS

- Efficient capture at the source
- Less corrosion and condensation
- Cleaner operating environment
- Lower volume of air treated

This summary is informative. Dimensions, materials, performance and final scope are defined by engineering after the diagnosis of the actual conditions of the process.
