BRUNNSCHWEILER

PRELIMINARY TECHNICAL SUMMARY

Heat recovery systems

Recover thermal energy from the process and reduce overall plant consumption.

OVERVIEW

Designed from the actual energy balance of the machine, our systems reuse the heat of exhaust air at points where it generates operational value.

BENEFITS AND CHARACTERISTICS

- Reduction of steam and energy consumption
- Better thermal balance of the plant
- Project integrated into the existing process
- Instrumentation to monitor performance

This summary is informative. Dimensions, materials, performance and final scope are defined by engineering after the diagnosis of the actual conditions of the process.
